

STREET LEVEL IMAGING SOLUTIONS FOR PARCEL VALUATION: APPRAISALS, AND COUNTY ASSESSMENTS

Visre, Street-Level Imagery Pilot Program

Visre offers an innovative street level imaging solution providing more photos in less time at a lower cost. This program is designed to enable a county to initiate a small imaging project to address and identify the need for updated street-level imagery as well as complete a technology integration process, all with a minimal investment required.

Eight (8) high-resolution cameras comprise the Visre 360 Video DriveBy™ Camera system. With each camera snapping photos at 12 frames per second, dozens of images are typically captured per parcel from the initial approach to the direct drive-by and final departure angles of view. In normal driving through densely populated areas, several thousand of parcels can be imaged daily by a single vehicle. Saved to a high capacity Terabyte external hard drive secured within the vehicle, every image captured is GPS geo-encoded to the LAT/LON coordinates of the vehicle and date/time stamped. Digital photos are named and watermarked to county specifications enabling easy integration into existing systems. Delivery of complete county image libraries are available from Visre via FTP, External Hard Disk Drive, and Visre's 3V application software. Individual parcel images and video driveby's are available via a secure link at www.visre.com.

Pilot Program Features:

- Minimum parcel count 20,000, maximum parcel count 50,000
- Purchase orders must be received by December 20th 2009
- Any county that proceeds with a county wide street-level image capture project, (entire parcel layer), within 12-months of their pilot project image delivery date, will receive a discount for the total per parcel cost of their pilot project
- Perpetual License for all watermarked Imagery provided in Pilot Project

Pilot Program Pricing & Services:

- \$0.80 per parcel for 20,000 to 50,000 parcels, for 3-single shot images; (45-degree approach, front, 45-degree departure).
- Business Panorama View;
 - 90° Degrees - \$0 additional cost for up to 1,000 business parcels (to be included within overall parcel count for specified pilot project).
 - 135° Degree - \$0 additional cost for up to 1,000 business parcels (to be included within overall parcel count for specified pilot project).
- 360° Degree Video DriveBy - \$0 additional cost - for specified pilot project parcel layer.
- \$3,000 System Set up Fee, Including System Integration & Data Conversion services, (this will provide a County with 40 hours of Technical/Consulting services in order to fully implement our Street-level imaging solution).
